

# Fusion Salon Ombre Brows Consent Form

This form is designed to give information needed to make an informed decision of whether to undergo a permanent cosmetics application. If you have questions, please do not hesitate to ask. Although permanent cosmetic tattooing is effective in most cases, no guarantee can be made that a specific client will benefit from the procedure. All instruments that enter the skin or encounter body fluids are sealed and sterilized before use and disposed of after use. Generally, the results are excellent. However, a perfect result is not a realistic expectation. It is usual to expect a touch-up after the healing is completed. Initially the color will appear much more dark or vibrant compared to the healed result. Usually within 4-6 weeks the color will fade 10-50%, will soften, and will look more natural. The pigment is permanent but will fade somewhat over time and will likely need to be touched-up throughout the years.

**PHOTOGRAPHY AND VIDEOGRAPHY RELEASE CONSENT** Our insurance company requires "Before" and "After" photos/videos be taken and kept on file. We would like your permission to use these photos/videos for advertising. For example, in portfolios, online and in print ads, etc. Your consent is necessary regarding this. Please circle and indicate with your signature if you would like your photos/video used or not used in advertising.

YES, feel free to use them

NO, please do not use them

## **POSSIBLE RISKS, HAZARDS, OR COMPLICATIONS:**

- Pain: There can be pain involved even after the topical anesthetic has been used. Anesthetics work better on some people than others. Your artist will work to ensure your comfortability throughout the service.
- Infection: Infection is very unusual. The areas treated must be kept clean and only freshly cleaned hands should touch the areas. See "After Care" sheet for instructions on care.
- Uneven Pigmentation: This can result from poor healing, infection, bleeding, or many other causes. Your follow up appointment will likely correct any uneven appearance.
- Asymmetry: Every effort will be made to avoid asymmetry but our faces are not symmetrical so adjustments may be needed during the follow up session to correct any unevenness.
- Excessive Swelling or Bruising: Some people may bruise and swell more than others. Ice packs may help and the bruising and swelling typically disappears within 1-5 days. Some people do not bruise or swell at all.
- Anesthesia: Topical anesthetics are used to numb the area to be tattooed. Lidocaine, Prilocaine, Benzocaine, Tetracaine and Epinephrine in a cream or gel form are typically used. If you are allergic to any of these please inform me now.
- MRI: Because pigments used in permanent cosmetic procedures contain inert oxides, a low-level magnet may be required if you need to be scanned by an MRI machine. You must inform your technician of any tattoos or permanent cosmetics.
- Fever Blisters: If you are prone to cold sores or fever blisters, (herpes simplex), there is a high probability that you will get them. It is advised that you call your doctor for a prescription antiviral to help prevent this from occurring.
- Allergic Reaction: There is a small possibility of an allergic reaction.
- Giving Blood: The Red Cross has suggested that you do not give blood for 6 months following treatment.
- MRI Scans: This procedure shows up as an artifact on the scan. Some clients may experience a tingling sensation. Please notify your radiologist.
- Injectables: Dermal fillers and Botox can alter the shape of the eyebrows. The client should be advised that injectables should be carried out after microblading procedure and not prior.
- Laser/Pulsed Light: Laser or pulsed light hair removal or skin rejuvenation treatments can cause color change. It is important to advise the therapist that you have had Microblading procedure, as this cannot be rectified with another Microblading procedure.

**STATEMENT OF CONSENT AND RECITALS: Please read and initial all lines**

\_\_\_\_\_ Aftercare instructions have been explained to me and a written copy will be given to me to retain in my possession, which I will follow to the best of my ability. If I have questions I will call or email you.

\_\_\_\_\_ I understand that a certain amount of discomfort is associated with this procedure and that swelling, redness, and bruising may occur.

\_\_\_\_\_ I understand that sun, tanning beds, pools, some skin care products, and medications can affect my permanent makeup.

\_\_\_\_\_ I will tell all skin care professionals or medical personnel about my permanent makeup procedures, especially if I am scheduled for an MRI.

\_\_\_\_\_ I accept the responsibility for explaining to you my desire for specific colors, shape, and position for any procedure done today.

\_\_\_\_\_ I understand that implanted pigment color can slightly change or fade over time due to circumstances beyond your control and I will need to maintain the color with future applications and a touch up session within 60 days.

\_\_\_\_\_ I acknowledge that the proposed procedure(s) involved risks inherent in the procedure and have possibilities of complications during and/or following the procedures such as: infections, misplaced pigment, poor color retention and hyperpigmentation.

\_\_\_\_\_ I have been quoted the cost of today's appointment, which includes one (1), touch up within 60 days. After 60 days a fee will apply and there will be no refunds for this elective procedure(s).

\_\_\_\_\_ I accept full responsibility for the decision to have this cosmetic tattoo work done. I certify that I have read or have been read all the contents of this form. I understand the risks and alternatives involved in this procedure(s) and I have had the opportunity to ask questions and all my questions have been answered. I acknowledge that I have reviewed and approved the material given to me and I authorize \_\_\_\_\_, as my permanent cosmetics technician to perform on my body the following procedures.

**AFTERCARE: After care is especially important for producing a beautiful and lasting result.**

- Keep the area clean by washing with freshly washed hands and a mild soap. Do not use a washcloth or sponge to remove soap. Simply splash with water. Do not use cleansing creams, acne cleansers or astringents. Use a mild, natural soap.
- Apply the aftercare balm with freshly washed hands or a Q-tip. If the balm is too stiff to use, simply warm it up in a glass of warm water or on your finger. Use the balm very sparingly. Too little is better than too much. Blot off excess with a clean tissue. Never touch the procedure area without washing your hands immediately before.

- Do not scrub, rub, or pick at the epithelial crust that forms. Allow it to flake off by itself. If it is removed before it is ready the pigment underneath it can be pulled out.
- Do not use any makeup near the procedure area for at least 3 days. Purchase new mascara and makeup if possible to avoid contamination or bacterial infection.
- Always use a sunblock after the procedure area is healed to protect from sun fading.

## WHAT'S NORMAL?

- Swelling, itching, scabbing, light bruising, and dry tightness. Ice packs are a nice relief for swelling and bruising. Aftercare balm is nice for scabbing and tightness.
- Too dark and slightly uneven appearance. After 2-7 days the darkness will fade and once swelling dissipates unevenness usually disappears. If they are too dark or still a bit uneven after 4 weeks, then we will make adjustments during the touch up appointment.
- Color change or color loss. As the procedure area heals the color will lighten and sometimes seem to disappear. This can all be addressed during the touch up appointment and is why the touch up is necessary. The procedure area must be completely healed before we can address any concerns. This takes at least four weeks.
- Needing a touch up months or years later. A touch up may be needed 1 to 3 years after the initial procedure depending on your skin, medications, and sun exposure. We recommend a touch up 30-45 days after the first session (included in today's price) and every few years to keep them looking fresh and beautiful. Touch up sessions after 60 days will be **\$195** or current touch up rate at time of touch up. \*\*\*Failure to follow aftercare instructions may result in infections, pigment loss or discoloration. I understand, agree to, and have read to the above instructions.

### **BEFORE AND AFTER YOUR TREATMENT:**

Before your treatment, prior to your permanent cosmetic enhancement, think about the look that you wish to achieve. As experts in the field of color analysis, we ensure that the correct colors and shape is chosen for you, however you are part of the decision-making process. Permanent cosmetic enhancements normally require multiple application sessions. To achieve the best results, you will be required to return for at least one control procedure four to six weeks after the initial application. Be prepared for the color intensity to be significantly sharper and darker immediately after the procedure. This will subside and become softer as the skin heals. This process can take up to fourteen days. Since delicate skin or sensitive areas may be swollen or red, you are advised not to make social plans on the day of your enhancement. Please wear your normal make-up to your enhancement appointment.

-Do not take aspirin or Ibuprofen 2 days prior to and after your enhancement.

-Do not use Retin-A skincare products close to the enhancement area 2 weeks prior to and after your procedure.

-IPL laser hair removal should be performed no less than 2 weeks prior to your enhancement.

-Electrolysis treatments should be performed no less than 5 days prior to your enhancement.

-Eyebrow tinting should not be undertaken for 3 weeks after your enhancement.

After your treatment, the area treated may show redness and swelling and that the color may look dark and intense—this is quite normal. Additional treatments cannot be undertaken until the area has completely healed. A 4-6-week healing time is required before any more work can be undertaken. In order to let your brows heal well, avoid water on the brow area; makeup to the brow area, excessive sweating, sauna, or pool for 7 days. Once the area has healed completely, approximately one week, consider using a waterproof sunblock when going out in the sun to stop the color fading. Strong chemicals or glycolic acid/peels of any kind may cause the pigment to lighten. Always consult your PMU Artist if there is any doubt. Do not pick or pull at the treated area, as it will result in pigment loss.

You will go through three healing phases: 1-healing, 2-peeling, and 3- fading. You may notice whiteness or blanching around the area, this is quite normal and will subside within 12 hours. If you find any lymphatic fluid or blood weeping you can gently clean the area, blotting gently to dry and remove any moisture. With clean hands and a cotton pad, apply a fine layer of aftercare balm to the treated area. Repeat this procedure up to 3 times a day if the area feels tight. After the fine scabbing has sloughed away you will see a different hue to the color implanted.

### **Frequently Asked Questions:**

1. What is 3D Eyebrow Microblading? It is a semi-permanent makeup method; the technique is natural feathering of hair-like strokes directly on the skin's surface that creates natural looking eyebrows. 3D Eyebrow Microblading creates the background and fills in the areas of the eyebrows that look empty so that a full and complete look is accomplished. The "3D" effect added realism to the result. Unlike a traditional eyebrow tattoo, 3D Eyebrow Microblading does not leave a flat, dull, and fake look that tattoos leave behind and is a MUCH SAFER treatment. The 3D Eyebrow Microblading method can fill in sparse brows or create an entire brow, which makes it the perfect procedure for Men and Women.

2. Does it hurt? We get mixed reviews on pain. Everyone has a different level of sensitivity so topical anesthetics are applied before and during the treatment to alleviate any sensation or discomfort. Some clients naturally feel one brow sorer than the other. You will hear a scratch noise/ sensation throughout. Music is usually played during the procedure; however, feel free to bring your own headphones and music to distract you.

4. Is it safe? Absolutely. Sterilized, disposable needles and supplies are used during the process.

5. Will I be swollen? There is a slight possibility of swelling. You might have slightly red skin around the eyebrows, but this would last no more than 1 hour.

6. Will I need a touch up? Most likely. Within a week of your first treatment the color will fade significantly and over the next four to six weeks can continue to fade as much as 50%. This is considered an extremely positive occurrence as it allows you time to reflect on your shape and color. After this period, your follow-up appointment is carried out. At this point any changes you would like to make are discussed.

7. How often do I need a touch up? In order to keep your eyebrows tattoo results looking fresh, we recommend a touch up every year.

8. How long does it last? It will last as long as it is maintained. Untouched, the pigment will last up to 4 years.

9. Why do I need a touch up if this is semi-permanent? Because color is implanted in the facial area there tends to be more fluid circulation than other parts of the body. Your face sees the most wear of any piece of you—exposure to the sun, food, facial products—the list goes on and on. All these things cause permanent color to fade; this is why you need a touch up.

10. How long does it take? The procedure takes roughly about two hours, sometimes more sometimes less. Please allow a solid 3-hours window for your appointment. I likely will not need that much time, but this is not something I want to rush.

11. Do I need to take a day of work? No. There is no downtime associated with the treatment. Redness and swelling will dissipate within an hour after. Your brows will appear darker initially, but not so dark that you will be prevented from your activities of daily living.

12. How long does it take to heal? Healing time varies from individual to individual. Usually, it takes about a week to ten days for the epithelial crust to form and slough off. Your skin will be considered healed after that happens. Then, the pigment takes some time to settle into the skin. A good month should pass before I consider the process complete.

13. What is the process like? Eyebrow tattooing is a two-step treatment consisting of an initial procedure and a touch up between 4 to 6 weeks after. After taking your before photo, I will draw the brow design in pencil so you will get an idea of the shape and form.

(Please note that nobody's face is totally symmetrical, and you need to be realistic with your expectations.) Once we have agreed on a final shape, I will shape your eyebrows then we will decide on the color. Shortly after that, a topical anesthetic will be administered to ensure comfort. Once you are numb, the pigment is deposited. During healing, it is normal to experience some pigment loss; this is why we have the touch up in place.

14. What can I NOT do after the procedure? You are advised to keep the skin clean and dry—that means no swimming, sweating, or otherwise getting the area wet; no tanning or prolonged sun exposure; no picking, peeling, scratching, or rubbing the tattoo as this may result in a loss of color and scarring. You can still wash your hair and face once they are healed.

15. How do I extend the life of the procedure? Your beautiful eyebrows will last longer if you apply sun block often and avoid abrasive facial treatments in the brow area.

16. How many colors do you have? I can blend several to achieve even more shades to suit the client. ALL clients who have had the procedure done will be conscious they have brows that are obvious, however, please bear in mind that the skin has been broken to allow the pigment settle and healing has yet to take place. This is why I ask you to bring your eyebrow pencil (if you use one) with you at the appointment—so I can match the pigment to the desired HEALED RESULT, which emerges after the crusts naturally fall off and the skin gently exfoliates naturally itself to reveal the new brow. Clients, who are used to having no brows for a long time, can find these few weeks challenging. I usually advise clients who have no brows to start wearing pencil or brow shading for some time before the process, so they get used to having a brow!

17. Do you have to shave off my own eyebrows? No. Every attempt is made to retain all-natural hair and integrate it into the design of the permanent eyebrows. In some cases, where shaping

of the natural brow is required, a few hairs here and there may need to be removed to create a clean and aesthetically pleasing result.

18. I have heard some clients just do not retain pigment even after a few visits. Could this happen? Yes, it does happen. A third appointment is often set up so that the client has the opportunity to return and I get the chance to review the work and sort out any (if any) tweaks that might need to be done. Often the clients cancel this appointment as all is usually well,

however, there are the occasional few that may need one or two extra strokes to finish off the look. Some people's skin may react to the trauma of the tattooing, and the skin may try to push out the foreign body of pigment by producing an extreme scab which eventually falls off taking all the pigment with it. There is a condition called Pigment Allergy (PPD Allergy, a condition known by dermatologists). The skin would have overreacted and become super sensitive to try to reject the pigment at any cost.. I can guarantee that your face is important to me and that I will act in accordance with my experience and expertise to give you my absolute best, but there are no guarantees in this industry.

19. What if I do not like it? Although Microblading is considered to be semi-permanent, the procedure does allow flexibility for color or shape change to some extent. I will allow you to have as much control over the procedure as possible, so there is truly little room for error. If for any reason you are unstratified with your results future services can be discussed such as natural fading or saline removal.

### **PRICES: FREE consultation**

**\$125** Deposit to book an appointment (it will be credited toward the procedure fee)

Ombre powder brows -- \$ \_\_\_\_\_ (includes one touch up)

Yearly touch up (for eyebrows) -- \$ \_\_\_\_\_ (Prices are subject to change without prior notice.)

Please read through the before and aftercare pages before your appointment to ensure that you are fully educated before procedure. Please do not bring children or pets to your appointments. If the client does not cancel within 24 hours or no-shows their appointment a 50% fee will be charged.

### **BEFORE YOUR TREATMENT:**

- Do not work out the day of the procedure.
- Do not tan or have a sunburned face.
- Do not take Aspirin, Niacin, Vitamin E, or Ibuprofen 24 hours before procedure.
- No alcohol or caffeine on the day of the procedure.

-No waxing or tinting 3 weeks before.

-Please note that you will be more sensitive during your menstrual cycle.

### **AFTER YOUR TREATMENT:**

-No water, cleansers, creams, makeup, or any other products on the treated area for 10 days.

-4-5 hours after the procedure, clean the area with sterile water and cotton pad, gauze, or Q-tip. Allow to air dry.

-DO NOT rub, pick, or scratch the treated area. Let any scabbing or dry skin naturally exfoliate off. Picking can cause scarring.

-Avoid direct sun exposure or tanning for 3-4 weeks after procedure.

-Avoid heavy sweating for the first 10 days.

-NO facials, Botox, chemical treatments, or microdermabrasion for 4 weeks.

-Avoid sleeping on your face for the first 10 days.

### **PLEASE NOTE:**

EYEBROWS WILL APPEAR DARKER AND BOLDER DUE TO NATURAL SCABBING AND HEALING FOR THE FIRST 10 DAYS. THIS IS VERY COMMON FOR ALL PERMANENT COSMETIC PROCEDURES.

Permanent makeup is **NOT** recommended for any clients who are or have:

-Pregnant or nursing

-Diabetic

-Undergoing Chemotherapy (consult your doctor)

-Viral infections and/or diseases

-A Pacemaker or major heart problems

-Skin irritations near the treated area (rashes, sunburn, acne, etc.)

-Sick (cold, flu, etc.)

-Had Botox in the past 2 months

-Used Accutane in the past year
